

HEAVY METAL REMOVAL SYSTEM

LEADING MANUFACTURER OF
WATER FILTRATION SOLUTIONS

Heavy Metal Removal System is ideal for reduction of non-essential toxic metals from drinking water, as they are harmful to health on prolonged consumption

Long term exposure of these chemical elements would lead to problems relating to skin, lung, digestive system, kidney, blood etc

Key Features

01

Heavy Metal Removal System would reduce metals in water to safer limits

02

Lead and Arsenic metals will be reduced to safer limits even when they occur in 2-3 times higher concentration than specification

03

Iron will be reduced to a safer limit, even when the concentration is upto ten times higher than specification

04

Traces of cadmium, chromium and mercury would also be removed

Depth Filtration has more than 19 years of experience in the field of water filtration

Trusted by India's largest water purifier manufacturing companies for its quality products

Our USP

One of the largest sediment filter manufacturers in India

Based on well-known Adsorption Technology

Certifications

Green Company

ISO 9001:2015

Technical Specifications*

01

Operating temperature:
Less than 45°C

02

Flow rate:
1 Ltr/min

03

Input/Output connection:
1/4" QCC

04

Media life: 6,000 Ltrs
(approximately one year @ 15 litres/day)
